## NATIONAL LEVEL SCIENCE TALENT SEARCH EXAMINATION - 2015 (UPDATED)

## Solutions for Class : 12 (PCM)

## Paper Code: UN412

## Mathematics

1. (A)

$$
\begin{aligned}
\mathrm{f}(1) & =\operatorname{Ltf}_{x \rightarrow 1}(x)=\operatorname{Ltt}_{x \rightarrow 1}(1-x) \tan \left(\frac{\pi}{2} x\right) \\
& =\operatorname{Ltt}_{h \rightarrow 0}(1-(1+\mathrm{h})) \tan \left(\frac{\pi}{2}(1+\mathrm{h})\right) \\
& =\operatorname{Ltt}_{h \rightarrow 0}(-\mathrm{h}) \tan \left(\frac{\pi}{2}+\frac{\pi}{2} \mathrm{~h}\right) \\
& =\operatorname{Ltt}_{h \rightarrow 0}-\mathrm{h}\left(-\cot \left(\frac{\pi}{2} \mathrm{~h}\right)\right) \\
& =\operatorname{Ltt}_{h \rightarrow 0} \frac{\frac{\pi}{2} \mathrm{~h}}{\tan \left(\frac{\pi}{2} \mathrm{~h}\right)} \cdot \frac{2}{\pi}=\frac{2}{\pi}
\end{aligned}
$$

2. (A) As domain of $\cos ^{-1} x$ is $[-1,1]$, therefore, domain of $\mathrm{f}(x)$ is given by
$-1 \leq \frac{2-|x|}{4} \leq 1 \Leftrightarrow-4 \leq 2-|x| \leq 4$
$\Leftrightarrow-6 \leq-|x| \leq 2 \Leftrightarrow 6 \geq|x| \geq 2$
$\therefore \mathrm{f}(x)$ is defined only for $|x| \leq 6$.
3. (D)
 $=0 \times 0=0$
4. (B) Let $\overrightarrow{\mathrm{a}}=\mathrm{a}_{1} \hat{\mathrm{i}}+\mathrm{a}_{2} \hat{\mathrm{j}}+\mathrm{a}_{3} \widehat{\mathrm{k}}$

$$
\text { then } \begin{aligned}
\overrightarrow{\mathrm{a}} \times \hat{\mathbf{i}} & =\left(\mathrm{a}_{1} \hat{\mathrm{i}}+\mathrm{a}_{2} \hat{\mathrm{j}}+\mathrm{a}_{3} \hat{\mathrm{k}}\right) \times \hat{\mathrm{i}} \\
& =\mathrm{a}_{1} \overrightarrow{\mathrm{o}}+\mathrm{a}_{2}(-\hat{\mathrm{k}})+\mathrm{a}_{3} \hat{j} \\
& =-\mathbf{a}_{2} \widehat{\mathrm{k}}+\mathrm{a}_{3} \hat{j} \\
\Rightarrow|\overrightarrow{\mathrm{a}} \times \hat{\mathrm{i}}|^{2} & =\left(-\mathrm{a}_{2}\right)^{2}+\mathrm{a}_{3}^{2}=\mathbf{a}_{2}^{2}+\mathrm{a}_{3}^{2}
\end{aligned}
$$

Similarly, $|\overrightarrow{\mathbf{a}} \times \overline{\mathrm{j}}|^{2}=\mathrm{a}_{1}^{2}+\mathrm{a}_{3}^{2}$
and $|\vec{a} \times \hat{k}|^{2}=a_{1}^{2}+a_{2}^{2}$

$$
\begin{aligned}
& \therefore|\overrightarrow{\mathrm{a}} \times \hat{\mathrm{i}}|^{2}+|\overrightarrow{\mathrm{a}} \times \hat{\mathrm{j}}|^{2}+|\overrightarrow{\mathrm{a}} \times \hat{\mathrm{k}}|^{2} \\
& \quad \quad=2\left(\mathrm{a}_{2}^{1}+\mathrm{a}_{2}^{2}+\mathrm{a}_{3}^{2}\right)=2|\overrightarrow{\mathrm{a}}|^{2} 2 \times 1^{2}=2
\end{aligned}
$$

5. (C) Let I $=\int 5^{5^{5 x}} \cdot 5^{5^{x}} \cdot 5^{x} \mathrm{~d} x$

Put $5^{5^{5^{x}}}=\mathrm{t} \Rightarrow 5^{5^{5^{x}}} 5^{5^{x}} 5^{x}(\log 5)^{3} \mathrm{~d} x=\mathrm{dt}$
$\therefore \quad \mathrm{I}=\frac{1}{(\log 5)^{3}} \int 1 \mathrm{dt}=\frac{\mathrm{t}}{(\log 5)^{3}}+\mathrm{c}$
$\Rightarrow \mathrm{I}=\frac{5^{5^{5^{x}}}}{(\log 5)^{3}}+\mathrm{C}$
6. (D) Since, $\cos ^{-1} \cos x=x$ if $\mathrm{x} \in[0, \pi]$
$\therefore \quad y=\cos ^{-1}(\cos x)$
$\Rightarrow y=\cos ^{-1}(-\cos (\pi+x))$
$\Rightarrow y=\pi-\cos ^{-1}(\cos (\pi+x))$
$\Rightarrow y=\pi-(\pi+x)$
Since, $x=\frac{\pi}{4}$ and $\pi+x$ will lie between 0 and $\pi$.
Since, $\cos ^{-1} \cos x=x$ if $x \in[0, \pi]$
$\Rightarrow y=-x$
$\left.\frac{\mathrm{dy}}{\mathrm{d} x}\right|_{x=\frac{\pi}{4}}=-1$
7. (C) By property, adj $\mathrm{A}^{\mathrm{T}}-(\operatorname{adj} \mathrm{A})^{\mathrm{T}}=\mathrm{O}$ (null matrix)
8. (B) Since, $\mathrm{f}(-x)=\mathrm{f}(x)$
$\Rightarrow \mathrm{f}(x)$ is an even function and differential of an even function is an odd function.
9. (C) Let $\mathrm{f}(x)=18 x^{2}$

$$
\Rightarrow \int_{-1}^{7} 18 x^{2} \mathrm{~d} x=18\left[\frac{x^{3}}{3}\right]^{7}
$$

$=6\left((7)^{3}-(-1)^{3}\right)$
$=6(7)^{3}-6(-1)^{3}$
$\therefore$ Of the given options the value of $\mathrm{f}(x)$ is $18 x^{2}$.
10. (B) Given $\frac{\mathrm{dy}}{\mathrm{d} x}=\mathrm{y}+\frac{\mathrm{y}}{x}$ or $\frac{\mathrm{dy}}{\mathrm{y}}=\left(1+\frac{1}{x}\right) \mathrm{d} x$

On integration, we get
$\log |\mathrm{y}|=x+\log |x|+\mathrm{c} \quad$ or
$\log |y|-\log \mid x=x+c$
$\Rightarrow \log \left|\frac{\mathrm{y}}{x}\right|=x+\mathrm{c} \Rightarrow\left|\frac{\mathrm{y}}{x}\right|=\mathrm{e}^{x+C}$
$\Rightarrow \frac{\mathrm{y}}{\mathrm{x}}= \pm \mathrm{e}^{\mathrm{c}} \mathrm{e}^{x}$ or $\frac{\mathrm{y}}{x}=\mathrm{A}^{x}$
Where $\mathrm{A}= \pm \mathrm{e}^{\mathrm{c}}$ is a constant.
$\therefore y=\mathrm{A} x \mathrm{e}^{x}$
$\therefore$ The solution $\mathrm{y}=x \mathrm{e}^{\mathrm{x}}$ corresponds to $\ddot{\mathrm{A}}=1$.
11. (C) $\cos x+\sin x=\sqrt{2} \cos \left(x-\frac{\pi}{4}\right)$

So, $\mathrm{f}(x)=\left[\sqrt{2} \cos \left(x-\frac{\pi}{4}\right)\right]$
Since, $[x]$ is discontinuous at integral values of $x$.

Now, $\sqrt{2} \cos \left(x-\frac{\pi}{4}\right)$ is an integer at

$$
x=\frac{\pi}{2}, \pi, \frac{3 \pi}{2}, \frac{7 \pi}{4}
$$

12. (A)
13. (B) $\int x \log x(\log x-1) \mathrm{d} x$
$=\int \log x(x \log x-x) \mathrm{d} x$
Note that
$\frac{\mathrm{d}}{\mathrm{d} x}(x \log x-x)=x \frac{1}{x}+\log x-1=\log x$
$\int(x \log x-x)^{1}(\log x) \mathrm{d} x \mid\left(\mathrm{f}(x)^{\mathrm{n}} \mathrm{f}^{\prime}(x)\right.$ type
$=\frac{(x \log x-x)^{2}}{2}+\mathrm{C}$
14. (C) Since, $(\vec{a} \times \vec{b})^{2}=|\vec{a} \times \vec{b}|^{2}$
$\Rightarrow(\overrightarrow{\mathrm{a}} \times \overrightarrow{\mathrm{b}})^{2}=||\overrightarrow{\mathrm{a}}|| \overrightarrow{\mathrm{b}}\left|\sin \frac{\pi}{6}\right|^{2}$
$\therefore \quad(\overrightarrow{\mathrm{a}} \times \overrightarrow{\mathrm{b}})^{2}=16 \times 4 \times \frac{1}{4}=16$
15. (A)
$\overline{\mathrm{z}}=\left|\begin{array}{ccc}3-2 \mathrm{i} & 5+\mathrm{i} & 7+3 \mathrm{i} \\ -\mathrm{i} & -2 \mathrm{i} & 3 \mathrm{i} \\ 3+2 \mathrm{i} & 5-\mathrm{i} & 7-3 \mathrm{i}\end{array}\right|$
Applying $\left(\mathrm{R}_{1} \leftrightarrow \mathrm{R}_{3}\right)$
$=\left|\begin{array}{ccc}3+2 \mathrm{i} & 5-\mathrm{i} & 7-3 \mathrm{i} \\ \mathrm{i} & 2 \mathrm{i} & -3 \mathrm{i} \\ 3-2 \mathrm{i} & 5+\mathrm{i} & 7+3 \mathrm{i}\end{array}\right|=\mathrm{z}$
$\therefore \mathrm{z}=\overline{\mathrm{z}}, \mathrm{z}$ is purely real.
16. (D) Let the two positive numbers be $x$ and $y$
$\therefore \quad x+\mathrm{y}=\mathrm{k}$
Let $\mathrm{E}=x^{2}+\mathrm{y}^{2}$
$\Rightarrow \quad \mathrm{E}=x^{2}+(\mathrm{k}-x)^{2}$
for E to be minimum, we must have
$\Rightarrow \frac{\mathrm{dE}}{\mathrm{d} x}=2 x-2(\mathrm{k}-x)=0$
$\Rightarrow x=\frac{\mathrm{k}}{2}$
Now, $\frac{\mathrm{d}^{2} \mathrm{E}}{\mathrm{d} x^{2}}=4>0 \quad \forall x \in \mathrm{R}$ throughout
$\therefore$ E attains its minimum at $x=\frac{\mathrm{k}}{2}$
$\Rightarrow \mathrm{y}=\frac{\mathrm{k}}{2}$
17. (C) Given equation is

$$
\mathrm{e}^{x} \mathrm{dy}+\left(\mathrm{y} \mathrm{e} \mathrm{e}^{x}+2 x\right) \mathrm{d} x=0
$$

or
$e^{x} \frac{d y}{d x}+y^{x}+2 x=0$
or $\frac{d y}{d x}+y=-2 x \mathrm{e}^{-x}$, which is linear in $y$.
Here, I.F. $=\mathrm{e}^{\int 1 \mathrm{~d} x}=\mathrm{e}^{x}$ and solution is given by

$$
y e^{x}=\int\left(-2 x e^{-x}\right) e^{x} d x+C
$$

or $\quad y^{x}=-x^{2}+C$
18. (C)

Given curve is

$$
x^{2}+y^{2}-2 \mathrm{x}=0
$$

or $\quad x^{2}-2 x+1+y^{2}=1$
or $\quad(x-1)^{2}+y^{2}=1$
which is a circle with centre at $(1,0)$ and radius $=1$

Required area $=\int_{0}^{1}\left(1-\sqrt{1-(x-1)^{2}}\right) \mathrm{d} x$
For the circle,
$\mathrm{y}=\sqrt{1-(x-1)^{2}}$ in the first quadrant.
Required area $=$ area of $\mathrm{OABC}-\frac{1}{4}$ (area of the circle)
$=1 \times 1-\frac{1}{4}(\pi)$
$=\left(1-\frac{\pi}{4}\right)$ sq.units
19. (A) If A and B are orthogonal
$\Rightarrow A^{\prime}=I, B^{\prime}=I$
Now, $(\mathrm{AB})(\mathrm{AB})^{\prime}=\mathrm{AB}\left(\mathrm{B}^{\prime} \mathrm{A}^{\prime}\right)$
$\Rightarrow(\mathrm{AB})(\mathrm{AB})^{\prime}=\mathrm{A}\left(\mathrm{BB}^{\prime}\right) \mathrm{A}^{\prime}$
$(\mathrm{AB})(\mathrm{AB})^{\prime}=\mathrm{AI} \cdot \mathrm{A}^{\prime}=\mathrm{AA}^{\prime}=\mathrm{I}$
$\therefore \mathrm{AB}$ is also orthogonal
20. (A) $\sin \left[\cot ^{-1}\left\{\tan \left(\cos ^{-1} x\right)\right\}\right]$

$$
\begin{array}{r}
=\sin \left[\cot ^{-1}\left(\frac{\sqrt{1-x^{2}}}{x}\right)\right] \\
{\left[\text { Since } \tan \left(\cos ^{-1} x\right)=\frac{\sin \left(\cos ^{-1} x\right)}{\cos \left(\cos ^{-1} x\right)}\right.} \\
\left.=\frac{\sqrt{1-x^{2}}}{x}=\frac{\sqrt{1-x^{2}}}{x}\right]
\end{array}
$$

$=\sin \theta$, where $\theta=\cot ^{-1} \frac{\sqrt{1-x^{2}}}{x} \in(0, \pi)$
$=\frac{1}{\operatorname{cosec} \theta}=\frac{1}{\sqrt{1+\cot ^{2} \theta}}$
$=\frac{1}{\sqrt{1+\frac{1-x^{2}}{x^{2}}}}=\sqrt{x^{2}}=|x|$
21. (B) Since, $\mathrm{f}(x)=\sin x-\mathrm{b} x+\mathrm{c}$ is decreasing on $(-\infty, \infty)$, therefore,
$\mathrm{f}^{\prime}(x)=\cos x-\mathrm{b} \leq 0$ for all $x \in \mathrm{R}$
$\Rightarrow \cos x \leq \mathrm{b}$ for all $x \in \mathrm{R}$
$\therefore \mathrm{b} \geq 1 \quad(\mathrm{\square}|\cos x| \leq 1)$
22. (C) $|\vec{a}+\vec{b}|<1 \quad \Rightarrow|\vec{a}+\vec{b}|^{2}<1$

$$
\begin{aligned}
& \Rightarrow(\overrightarrow{\mathrm{a}}+\overrightarrow{\mathrm{b}}) \cdot(\overrightarrow{\mathrm{a}}+\overrightarrow{\mathrm{b}})<1 \\
& \Rightarrow|\overrightarrow{\mathrm{a}}|^{2}+|\overrightarrow{\mathrm{b}}|^{2}+2 \overrightarrow{\mathrm{a}} \cdot \overrightarrow{\mathrm{~b}}<1 \\
& \Rightarrow 1+1+2 \overrightarrow{\mathrm{a}} \cdot \overrightarrow{\mathrm{~b}}<1 \\
& \Rightarrow \overrightarrow{\mathrm{a}} \cdot \overrightarrow{\mathrm{~b}}<-\frac{1}{2} \\
& \Rightarrow|\overrightarrow{\mathrm{a}}||\overrightarrow{\mathrm{b}}| \cos \theta<-\frac{1}{2} \\
& \Rightarrow 1 \times 1 \times \cos \theta<-\frac{1}{2} \\
& \Rightarrow \cos \theta<-\frac{1}{2} \\
& \Rightarrow-1 \leq \cos \theta<-\frac{1}{2} \\
& \Rightarrow \pi \geq \theta>\frac{2 \pi}{3}
\end{aligned}
$$

23. (D) $\quad \operatorname{adj}(\operatorname{adj} A)=|A|^{n-2} A$
24. (B) $f(2)=4, f^{\prime}(2)=1$

Let $\mathrm{E}=\operatorname{Lim}_{x \rightarrow 2} \frac{x \mathrm{f}(2)-2 \mathrm{f}(x)}{x-2} \quad\left(\frac{0}{0}\right.$ form $)$
By La Hospital Rule

$$
\begin{aligned}
& \Rightarrow \mathrm{f}^{\prime}(2)=\operatorname{Lim}_{x \rightarrow 2} \frac{\mathrm{f}(2)-2 \mathrm{f}^{\prime}(x)}{1} \\
& \therefore \mathrm{f}^{\prime}(2)=\frac{\mathrm{f}(2)-2 \mathrm{f}^{\prime}(2)}{1}=4-2(1)=2
\end{aligned}
$$

25. (D) Let $\mathrm{I}=\int \frac{1}{1+\sin x} \mathrm{~d} x$

$$
\begin{aligned}
& \Rightarrow \mathrm{I}=\int \frac{1}{1+\cos \left(\frac{\pi}{2}-x\right)} \mathrm{d} x \\
& \\
& =\int \frac{\mathrm{d} x}{2 \cos ^{2}\left(\frac{\pi}{4}-\frac{x}{2}\right)} \\
& \Rightarrow \mathrm{I}=\int \frac{1}{2} \sec ^{2}\left(\frac{\pi}{4}-\frac{x}{2}\right) \mathrm{d} x \\
& \Rightarrow \mathrm{I}=-\tan \left(\frac{\pi}{4}-\frac{x}{2}\right)+\mathrm{c} \\
& \Rightarrow \mathrm{I}=\tan \left(\frac{x}{2}-\frac{\pi}{4}\right)+\mathrm{c} \\
& \therefore \quad \mathrm{a}=-\frac{\pi}{4} ; \mathrm{b}=\mathrm{c}
\end{aligned}
$$

26. (C) Here,

$$
\begin{aligned}
\operatorname{Lt}_{x \rightarrow-1^{+}} \mathrm{f}(x) & =\operatorname{Lt}_{x \rightarrow-1^{+}} \frac{|x+1|}{\tan ^{-1}(x+1)} \\
& =\operatorname{Lt}_{x \rightarrow-1^{+}} \frac{x+1}{\tan ^{-1}(x+1)}=1
\end{aligned}
$$

Since $x \rightarrow-1^{+} \Rightarrow x+1 \rightarrow 0^{+}$and

$$
\left.\underset{\mathrm{t} \rightarrow 0}{\mathrm{Lt}} \frac{\tan \mathrm{t}}{\mathrm{t}}=1=\underset{\mathrm{s} \rightarrow 0}{\mathrm{Lt}} \frac{\mathrm{~s}}{\tan ^{-1} \mathrm{~s}}\right]
$$

and $\operatorname{Ltt}_{\mathrm{x} \rightarrow 1^{-}} \mathrm{f}(x)=\operatorname{Lt}_{\mathrm{x} \rightarrow-1^{-}} \frac{|x+1|}{\tan ^{-1}(x+1)}$

$$
=\operatorname{Lt}_{x \rightarrow-1^{-}} \frac{-(x+1)}{\tan ^{-1}(x+1)}=-1
$$

27. (B) $\mathrm{g}(\mathrm{x})=\sin \left(\frac{\pi x}{2}\right)$ is a bijection.
28. (C)

$$
\begin{aligned}
& \frac{\mathrm{d}}{\mathrm{~d} x}\left(\tan ^{-1} \frac{1}{x}\right)=\frac{1}{1+\frac{1}{x^{2}}}\left(-\frac{1}{x^{2}}\right)=-\frac{1}{1+x^{2}} \\
& \Rightarrow \mathrm{I}=\int \frac{\mathrm{d}}{\mathrm{~d} x}\left(\tan ^{-1} \frac{1}{x}\right) \mathrm{d} x=-\int_{-1}^{1} \frac{\mathrm{~d} x}{1+x^{2}} \\
& \Rightarrow \mathrm{I}=-\left.\tan ^{-1} x\right|_{-1} ^{1} \\
& \Rightarrow \mathrm{I}=-\frac{\pi}{4}+\left(-\frac{\pi}{4}\right)=-\frac{\pi}{2}
\end{aligned}
$$

Note:
$\mathrm{I}=\tan ^{-1}\left(\frac{1}{x}\right)_{-1}^{1}=\frac{\pi}{4}-\left(-\frac{\pi}{4}\right)=\frac{\pi}{2}$ is
incorrect.
since, the function $\tan ^{-1}\left(\frac{1}{x}\right)$ is not an antiderivative of $\frac{\mathrm{d}}{\mathrm{d} x} \tan ^{-1}\left(\frac{1}{x}\right)$ on the interval $[-1,1]$.
29. (C) Since, $\tan ^{-1} \sqrt{x(x+1)}+\sin ^{-1}$

$$
\begin{array}{r}
\sqrt{x^{2}+x+1}=\frac{\pi}{2} \text { (given) } \\
\Rightarrow \cos ^{-1} \frac{1}{\sqrt{\left(x^{2}+x\right)^{2}+1}}+\sin ^{-1} \sqrt{x^{2}+x+1}=\frac{\pi}{2} \\
\Rightarrow \cos ^{-1} \frac{1}{\sqrt{\left(x^{2}+x\right)^{2}+1}}=\frac{\pi}{2}-\sin ^{-1} \sqrt{x^{2}+x+1}
\end{array}
$$

$\Rightarrow \cos ^{-1} \frac{1}{\sqrt{\left(x^{2}+x\right)^{2}+1}}=\cos ^{-1} \sqrt{x^{2}+x+1}$
$\Rightarrow \frac{1}{\sqrt{\left(x^{2}+x\right)^{2}+1}}=\sqrt{x^{2}+x+1}$
$\Rightarrow 1=\left(x^{2}+x^{2}+1\right)\left\{\left(x^{2}+x^{2}\right)+1\right\}$
$\Rightarrow\left(x^{2}+x\right)^{3}+\left(x^{2}+x\right)^{2}+\left(x^{2}+x\right)+1=1$
$\Rightarrow\left(x^{2}+x\right)\left\{\left(x^{2}+x\right)^{2}+\left(x^{2}+x\right)+1\right\}=0$
$\Rightarrow x^{2}+x=0$
$\Rightarrow x=0,-1$
30. (D) If e is the identity element w.r.t. 'o' then aoe $=$ eoa $=\mathrm{a}$ for all $\mathrm{a} \neq-1$
$\Rightarrow \mathrm{a}+\mathrm{e}+\mathrm{ae}=\mathrm{a}$
$\Rightarrow \mathrm{e}(1+\mathrm{a})=0$
$\Rightarrow \mathrm{e}=0$ (since $\mathrm{a} \neq-1, \therefore \mathrm{a}+1 \neq 0)$
31. (A) Let at any instant of time $t$ min, the depth of the wheat in the cylinder be $h \mathrm{ft}$., then the volume $\mathrm{Vft}{ }^{3}$ of the wheat at that instant is given by

$$
\begin{gathered}
\mathrm{V}=\pi(10)^{2} \mathrm{~h}=100 \pi \mathrm{~h} \\
\Rightarrow \frac{\mathrm{dV}}{\mathrm{dt}}=100 \pi \frac{\mathrm{dh}}{\mathrm{dt}} \Rightarrow 314=100 \pi \frac{\mathrm{dh}}{\mathrm{dt}}
\end{gathered}
$$

$$
\text { (Since } \left.\frac{\mathrm{dV}}{\mathrm{dt}}=314\right)
$$

$$
\Rightarrow \frac{\mathrm{dh}}{\mathrm{dt}}=\frac{314}{100(3.14)}(\text { Taking } \pi=3.14)
$$

$\therefore$ The depth of the wheat in the cylinder is increasing at the rate of 1 cubic ft , per minute.
32. (A) The resultant force is given by

$$
\overrightarrow{\mathrm{F}}=6 \frac{(\hat{\mathrm{i}}-2 \hat{\mathrm{j}}+2 \hat{\mathrm{k}})}{\sqrt{1+4+4}}+7 \frac{(2 \hat{\mathbf{i}}-3 \hat{\mathrm{j}}-6 \hat{\mathrm{k}})}{\sqrt{4+9+36}}
$$

$\overrightarrow{\mathrm{F}}=4 \hat{\mathbf{i}}-7 \hat{\mathrm{j}}-2 \hat{\mathbf{k}}$
Now $\overrightarrow{\mathrm{d}}=$ displacement
$\Rightarrow \overrightarrow{\mathrm{d}}=\overrightarrow{\mathrm{PQ}}=(5 \hat{\mathrm{i}}-\hat{\mathrm{j}}+\hat{\mathrm{k}})-(2 \hat{\mathrm{i}}-\hat{\mathrm{j}}-3 \hat{\mathrm{k}})$
$\Rightarrow \overrightarrow{\mathrm{d}}=(3 \hat{\mathbf{i}}+4 \hat{\mathrm{k}})$
$\therefore$ Workdone $=\overrightarrow{\mathrm{F}} \cdot \overrightarrow{\mathrm{d}}=12+0-8=4$ unit
33. (B) If ' $a$ ' is the radius of the circle, then its centre is ( $-\mathrm{a}, \mathrm{a}$ ).
Hence, the equation of the circle is

$$
\begin{gather*}
 \tag{1}\\
\\
\text { or } \quad \\
x^{2}+\mathrm{y}^{2}+(\mathrm{y}+\mathrm{a}-\mathrm{a}-2)^{2}=\mathrm{a}^{2} \\
x^{2} y+\mathrm{a}^{2}=0
\end{gather*}
$$

Differentiating w.r.t. $x$, we get

$$
2 x+2 \mathrm{yy}_{1}+2 \mathrm{a}-2 \mathrm{ay}_{1}=0
$$

$\Rightarrow \quad \frac{x+\mathrm{yy}_{1}}{\mathrm{y}_{1}-1}=\mathrm{a}$
Substituting this value of a in (1), we get

$$
\begin{align*}
\left(x+\frac{x+\mathrm{yy}_{1}}{\mathrm{y}_{1}-1}\right)^{2}+(y & \left.-\frac{x+\mathrm{yy}_{1}}{\mathrm{y}_{1}-1}\right)^{2}  \tag{2}\\
& =\left(\frac{x+\mathrm{yy}_{1}}{\mathrm{y}_{1}-1}\right)^{2}
\end{align*}
$$

$$
\text { or } \quad\left(x y_{1}+y y_{1}\right)^{2}+(-y-x)^{2}=\left(x+y y_{1}\right)^{2}
$$

or

$$
(x+y)^{2}\left(y_{1}^{2}+1\right)=\left(x+y y_{1}\right)^{2}
$$

34. (A) $\quad$ i) $(a, b) \in R \Leftrightarrow a R b \Leftrightarrow b R^{-1} a \Leftrightarrow(b, a) \in R^{-1}$

$$
\therefore R^{-1}=\{(b, a):(a, b) \in R\}
$$

ii) Let $R=R^{-1}$

Let $(a, b) \in R$
$\therefore(\mathrm{a}, \mathrm{b}) \in \mathrm{R}^{-1}$
$(b, a) \in R$
$\therefore(a, b) \in R \Rightarrow(b, a) \in R$
$\therefore \mathrm{R}$ is symmetric
Conversely, let ( $a, b$ ) $\in R$
$\Rightarrow(b, a) \in R$
$\Rightarrow(\mathrm{a}, \mathrm{b}) \in \mathrm{R}^{-1}$
Since $R \subseteq R^{-1}$
$\operatorname{Let}(a, b) \in R^{-1}$
Since (b, a) $\in R$
$\Rightarrow(a, b) \in R$
$\mathrm{R}^{-1} \subseteq \mathrm{R}$
Combining, we get $\mathrm{R}=\mathrm{R}^{-1}$
35. (B) Required area $=2 \int_{0}^{1}\left(|x|-x^{2}\right) \mathrm{d} x$

$$
\begin{aligned}
&=2 \int_{0}^{1}\left(x-x^{2}\right) \mathrm{d} x \\
&=2\left[\left(\frac{x^{2}}{2}\right)_{0}^{1}-\left(\frac{x^{3}}{3}\right)_{0}^{1}\right]=2\left[\frac{1}{2}-\frac{1}{3}\right] \\
&=2\left(\frac{1}{6}\right)=\frac{1}{3}
\end{aligned}
$$

36. (A) The given system of equations has a unique solution if

$$
\begin{aligned}
& \left|\begin{array}{rrr}
1 & 1 & 1 \\
2 & 1 & -1 \\
3 & 2 & \mathrm{k}
\end{array}\right| \neq 0 \\
& \Rightarrow \mathrm{k} \neq 0
\end{aligned}
$$

37. (A) Let $\Delta=\left|\begin{array}{lll}a_{21} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33}\end{array}\right|$

$$
\begin{gathered}
=\left|\begin{array}{ccc}
0 & -1 & -1 \\
1 & 0 & -1 \\
1 & 1 & 0
\end{array}\right| \\
=0+1(0+1)-1(1)=0
\end{gathered}
$$

38. (C) Since, $\tan ^{-1}(1+x)+\tan ^{-1}(1-x)=\frac{\pi}{2}$

$$
\begin{aligned}
& \Rightarrow \tan ^{-1}(1+x)=\frac{\pi}{2}-\tan ^{-1}(1-x) \\
& \Rightarrow \tan ^{-1}(1+x)=\cot ^{-1}(1-x) \\
& \Rightarrow \tan ^{-1}(1+x)=\tan ^{-1}\left(\frac{1}{1-x}\right) \\
& \Rightarrow 1+x=\frac{1}{1-x} \\
& \Rightarrow 1+x^{2}=1 \\
& \therefore x=0
\end{aligned}
$$

39. (D) $\quad \operatorname{Here},(\mathrm{fog})(x)=\mathrm{f}(\mathrm{g}(x))$

$$
\begin{aligned}
& =\mathrm{f}(x-[x])(\square 0 \leq x-[x]<1) \\
& =[x-[x]]=0
\end{aligned}
$$

40. 

(B) $\overrightarrow{\mathrm{AB}}+\overrightarrow{\mathrm{AC}}=$ P.V. of $\mathrm{B}=$ P.V. of C
(Taking A as origin)
$=2(\mathrm{P} . \mathrm{V}$. of mid-point of $([\mathrm{BC}])$
$=2 \mathrm{P} . \mathrm{V}$ of D
$=2 \overrightarrow{\mathrm{AD}}$

## Physics

41. (A)
$B=\mu_{0} n \mathrm{I}=\mu_{0} \frac{N}{l} \mathrm{I}=4 \pi \times 10^{-7} \times \frac{120}{0.2} \times 2.5$
$=1.885 \times 10^{-3} \mathrm{~T}$
42. (B) As the image formed is erect and hence virtual, the magnification produced by the lens is positive i.e. $\mathrm{m}=+4$.
Also, $f=+20 \mathrm{~cm}$
Now, $m=\frac{f}{u+f}$
$\therefore 4=\frac{20}{u+20}$ or $u+20=5$
or $u=-15 \mathrm{~cm}$
Again, $\mathrm{m}=\frac{\mathrm{f}-\mathrm{v}}{\mathrm{f}} \quad \therefore 4=\frac{20-\mathrm{v}}{20}$
or $\mathrm{v}=20-80=-60 \mathrm{~cm}$
43. (B) For the equilibrium of the proton as per the figure shown below.

$q \mathrm{E}=\mathrm{mg}$
$\mathrm{E}=\frac{\mathrm{mg}}{\mathrm{q}}$
$=\frac{1.67 \times 10^{-27} \times 9.8}{1.6 \times 10^{-19}}$
$=1.02 \times 10^{-7} \mathrm{~N} \mathrm{C}^{-1}$
The electric field is directed vertically upwards.
44. (A) The network of resistors connected to the battery of e.m.f. 9 V is shown below. Let I be the total current in the circuit. If $R^{\prime}$ is the effective resistance of the four resistors of $12 \Omega$ each connected in parallel, then $\frac{1}{\mathrm{R}^{\prime}}=\frac{1}{12}+\frac{1}{12}+\frac{1}{12}+\frac{1}{12}=\frac{4}{12} \quad$ or $\quad \mathrm{R}^{\prime}=3 \Omega$

Therefore, the effective resistance of the network of resistors,
$\mathrm{R}=\mathrm{R}^{\prime}+\mathrm{R}^{\prime}+\mathrm{R}^{\prime}=3+3+3=9 \Omega$
The current in the circuit
$\mathrm{I}=\frac{\mathrm{E}}{\mathrm{R}}=\frac{9}{9}=1 \mathrm{~A}$
Since all the four resistors are of the same resistance, same current will pass through the each resistor, Therefore, the current through each resistor $=$
$\frac{1}{4} \mathrm{I}=\frac{1}{4} \times 1=0.25 \mathrm{~A}$
45. (C) e $\mathrm{B} \times \Pi \mathrm{r}^{2} \times \mathrm{v}=\frac{1}{2} \mathrm{~B} \mathrm{r}^{2} \omega$

Here, $\mathrm{r}=200 \mathrm{~cm}=2 \mathrm{~m} ; \mathrm{B}=0.05 \mathrm{~Wb} \mathrm{~m}^{-2}$ and $\omega=60 \mathrm{rad} \mathrm{s}^{-1}$
$\therefore \quad \mathrm{e}=\frac{1}{2} \times 0.05 \times(2)^{2} \times 60=6 \mathrm{~V}$
46. (A) The average atomic mass of neon,

$$
\mathrm{A}=\frac{90.51 \times 19.99+0.27 \times 20.99+9.22 \times 21.99}{100}
$$

$$
=20.18 \text { a.m.u. }
$$

47. (B) A 0.1 m long bird will require frequency,

$$
\mathrm{v}=\frac{\mathrm{c}}{\lambda}=\frac{3 \times 10^{8}}{0.1}=3000 \mathrm{MHz}
$$

It is very close to the popular radar frequency. Indeed, radars occasionally detect birds.
48. (A) Four charges $q_{1}, q_{2}, q_{3}$ and $q_{4}$ are placed at the four corners of the square PQRS as shown below.
Here,

$\mathrm{q}_{1}=2 \mu \mathrm{C}=2 \times 10^{-6} \mathrm{C}$;
$\mathrm{q}_{2}=-2 \mu \mathrm{C}=-2 \times 10^{-6} \mathrm{C}$;
$\mathrm{q}_{3}=-3 \mu \mathrm{C}=-3 \times 10^{-6} \mathrm{C}$;
$q_{4}=6 \mu \mathrm{C}=6 \times 10^{-6} \mathrm{C}$;
and $\mathrm{PQ}=\mathrm{QR}=\mathrm{RS}=\mathrm{PS}=\sqrt{2} \mathrm{~m}$
Let $r$ be the distance of each charge from the centre $O$ of the square.

Then, $\sqrt{\mathrm{r}^{2}+\mathrm{r}^{2}}=\sqrt{2} \quad$ or $\mathrm{r}=1 \mathrm{~m}$
Potential at point $O$ due to charges at the four corners,

$$
\begin{gathered}
\mathrm{V}=\frac{1}{4 \Pi \varepsilon_{0}}\left(\frac{\mathrm{q}_{1}}{\mathrm{r}}+\frac{\mathrm{q}_{2}}{\mathrm{r}}+\frac{\mathrm{q}_{3}}{\mathrm{r}}+\frac{\mathrm{q}_{4}}{\mathrm{r}}\right) \\
\frac{1}{4 \Pi \varepsilon_{0}} \cdot \frac{1}{\mathrm{r}}\left(\mathrm{q}_{1}+\mathrm{q}_{2}+\mathrm{q}_{3}+\mathrm{q}_{4}\right) \\
\frac{9 \times 10^{9}}{1}\left(2 \times 10^{-6}+\left(-2 \times 10^{-6}\right)+\left(-3 \times 10^{-6}\right)+6 \times 10^{-6}\right) \\
=2.7 \times 10^{4} \mathrm{~V}
\end{gathered}
$$

49. (B) Here, $\mathrm{I}=10 \mathrm{~A} ; \mathrm{n}=100$;
$\mathrm{A}=40 \mathrm{~cm} \times 20 \mathrm{~cm}=800 \mathrm{~cm}^{2}$
$=8 \times 10^{-2} \mathrm{~m}^{2} ; \mathrm{B}=5 \mathrm{~T}$;
$\alpha=60^{\circ}$ (angle between field and plane of coil)
Now, $\tau=\mathrm{n}$ B I A $\cos \alpha$
$=100 \times 5 \times 10 \times 8 \times 10^{-2} \times \cos 60^{\circ}$
$=200 \mathrm{~N} \mathrm{~m}$
50. (C) Statements (A), (B) and (D) are true of photons. Photons are electrically neutral as they are not deflected by electric and magnetic fields.
51. (B) When cells are joined in series,
net e.m.f. of cells,
$\mathrm{E}=2.0+1.8+1.5=5.3 \mathrm{~V}$
The total internal resistance of the cells in series,
$\mathrm{r}=0.5+0.7+1=2.2 \Omega$
$\therefore \mathrm{I}=\frac{\mathrm{E}}{\mathrm{R}+\mathrm{r}}=\frac{5.3}{4+2.2}=\frac{5.3}{6.2}=0.854 \mathrm{~A}$
52. (C) Here, $\mathrm{d}=0.02 \mathrm{~cm} ; \mathrm{D}=80 \mathrm{~cm}$;
$\lambda=6000 \times 10^{-8} \mathrm{~cm}=6 \times 10^{-5} \mathrm{~cm}$;
For nth bright fringe, $y_{n}=\frac{n D \lambda}{d}$
For fifth maximum, $n=5$
$\mathrm{y}_{5}=\frac{5 \times 80 \times 6 \times 10^{-5}}{0.02}=1.2 \mathrm{~cm}$
53. (A) Half-life $=\mathrm{T}=12.5$ years

Let the initial amount be $\mathrm{N}_{0}$. This will be reduced to $\frac{\mathrm{N}_{0}}{2}$ after 12.5 years. After 25 years it will be reduced to $\frac{\mathrm{N}_{0}}{4}$. So, the fraction left undecayed is $\frac{1}{4}$.
54. (B) In descending order of wavelengths, the sequence of electromagnetic waves is; radio waves, microwaves, infrared radiation, visible light, ultraviolet rays, X-rays, gamma rays. Ultraviolet waves come after visible light.
55. (D) Here, $\mathrm{h}=6.62 \times 10^{-34} \mathrm{~J}$ s
de-Broglie wavelength of electron :
Here, $\mathrm{m}_{\mathrm{e}}=9.1 \times 10^{-31} \mathrm{~kg} ; \mathrm{v}_{\mathrm{e}}=10^{5} \mathrm{~m} \mathrm{~s}^{-1}$
$\therefore \quad \lambda_{\mathrm{e}}=\frac{\mathrm{h}}{\mathrm{m}_{\mathrm{e}} \mathrm{v}_{\mathrm{e}}}=\frac{6.62 \times 10^{-34}}{9.1 \times 10^{-31} \times 10^{5}}$
$=7.27 \times 10^{-9} \mathrm{~m}$
56. (B) Here, $\mathrm{L}=1.0 \mathrm{H} ; \mathrm{E}_{v}=110 \mathrm{~V} ; \mathrm{f}=70 \mathrm{~Hz}$

Now $X_{L}=\omega L=2 \pi \mathrm{fL}$
$=2 \times \frac{22}{7} \times 70 \times 1.0=440 \Omega$
57. (A) De Broglie proposed that the wave length $\lambda$ associated with a particle of momentum p is given as
$\lambda=\frac{\mathrm{h}}{\mathrm{p}}=\frac{\mathrm{h}}{\mathrm{mv}}$
where $m$ is the mass of the particle and $v$ its speed is known as the de Broglie relation and the wavelength $\lambda$ of the matter wave is called de Broglie wave length.
58. (C) When the amplifiers are connected in series, the net voltage gain $\left(A_{v}\right)$ is equal to the product of the gain of the individual amplifiers i.e.
$A_{v}=A_{v}{ }^{\prime} \times A_{v}{ }^{\prime \prime}$
Also, $A_{v}=\frac{V_{\text {out }}}{V_{\text {in }}}$
From the equations (i) and (ii), we have
$\frac{V_{\text {out }}}{V_{\text {in }}}=A_{v}{ }^{\prime} \times A_{v}{ }^{\prime \prime}$
or $V_{\text {out }}=V_{\text {in }} \times A_{v}{ }^{\prime} \times A_{v}{ }^{\prime \prime}$
$=0.01 \times 10 \times 30=3 \mathrm{~V}$
59. (C) $\mathrm{R}=0.4 \mathrm{~m}, \mathrm{f}=10 \mathrm{MHz}, \mathrm{K} . \mathrm{E} .=? \mathrm{~m}=10$
$\times 10^{6} \mathrm{~kg}$
Maximum K.E. $=2 \pi^{2} f^{2} R^{2} \mathrm{~m}=$
$2 \times(3.14)^{2} \times\left(10^{7}\right)^{2} \times(0.4)^{2} \times 1.67 \times 10^{-27}$
$=5.263 \times 10^{-13} \mathrm{~J}$
60. (B) $\frac{1}{\mathrm{v}}+\frac{1}{9}=\frac{1}{10}$
i.e., $v=-90 \mathrm{~cm}$

Magnitude of magnification =
$\frac{90}{9}=10 \mathrm{~cm}$
61. (C) Here, $\mathrm{A}=90 \mathrm{~cm}^{2}=90 \times 10^{-4} \mathrm{~m}^{2}$;
$\mathrm{d}=2.5 \mathrm{~mm}=2.5 \times 10^{-3} \mathrm{~m} ; \mathrm{V}=400$ volt
Now, $C=\frac{\varepsilon_{0} \mathrm{~A}}{\mathrm{~d}}=\frac{8.854 \times 10^{-12} \times 90 \times 10^{-4}}{2.5 \times 10^{-3}}$
$=3.187 \times 10^{-11} \mathrm{~F}$
Now,

$$
\begin{aligned}
& \mathrm{W}=\frac{1}{2} \mathrm{C} \mathrm{~V}^{2}=\frac{1}{2} \times 3.187 \times 10^{-11} \times(400)^{2} \\
& =2.55 \times 10^{-6} \mathrm{~J}
\end{aligned}
$$

62. (C) $\lambda_{\text {vacuum }}=\frac{\mathrm{c}}{\mathrm{v}}=\frac{3 \times 10^{8}}{5 \times 10^{14}}=6 \times 10^{-7} \mathrm{~m}$
63. (D) K.E. $=\frac{\mathrm{e}^{4} \mathrm{~m}}{8 \varepsilon_{0}^{2} \mathrm{n}^{2} \mathrm{~h}^{2}}=13.6 \mathrm{eV}$,
P.E. $=\frac{-\mathrm{Ze}^{2}}{8 \pi \varepsilon_{0} \mathrm{r}}=-2 \times$ K.E. $=-27.2 \mathrm{eV}$
64. (C) Here, $\mathrm{R}=10 \Omega ; \mathrm{L}=2 \mathrm{H} ; \mathrm{C}=25 \mu \mathrm{~F}$
$=25 \times 10^{-6} \mathrm{~F}$;
$\mathrm{E}_{\mathrm{v}}=200 \mathrm{~V}$
When the frequency of the a.c. supply equals the natural frequency of the circuit,
$\mathrm{X}_{\mathrm{L}}=\mathrm{X}_{\mathrm{C}}$ i.e. $\mathrm{Z}=\mathrm{R}$
$\therefore \mathrm{P}_{\mathrm{av}}=\mathrm{E}_{\mathrm{v}} \mathrm{I}_{\mathrm{v}}$
$=\mathrm{E}_{\mathrm{v}} \times \frac{\mathrm{E}_{\mathrm{v}}}{\mathrm{R}}=\frac{200 \times 200}{10}=4000 \mathrm{~W}$
65. (C) Let E be the e.m.f of the battery. The charging current I is opposed by the e.m.f. of the battery. According to Ohm's law.
$\mathrm{V}-\mathrm{E}=\mathrm{I} \mathrm{r}$
or $\mathrm{E}=\mathrm{V}-\mathrm{Ir}=12.5-0.5 \times 1=12 \mathrm{~V}$

## Chemistry

66. (D) Pyrophosphoric acid $\left(\mathrm{H}_{4} \mathrm{P}_{2} \mathrm{O}_{7}\right)$

contains four $\mathrm{P}-\mathrm{OH}$ groups and hence, it is a tetrabasic acid.
67. (C) $\mathrm{A} l^{3+}+3 \mathrm{e}^{-} \rightarrow \mathrm{A} l$
$\mathrm{Cu}^{2+}+2 \mathrm{e}^{-} \rightarrow \mathrm{Cu}$
$\mathrm{Na}^{+}+\mathrm{e}^{-} \rightarrow \mathrm{Na}$
Thus, 1 F will deposit $\frac{1}{3} \mathrm{~mol}, \mathrm{Al}, \frac{1}{2} \mathrm{~mol}$, Cu and 1 mol Na , i.e., moles deposited are in the ratio
$\frac{1}{3}: \frac{1}{2}: 1$ i.e., $2: 3: 6$ or $1: 1.5: 3$.
68. (A) It is a disubstituted complex and will show geometrical isomerism.
69. (D) When o- or p -phenolsulphonic acid is treated with $\mathrm{HNO}_{3}$, nitration occurs at o, p-positions with simultaneous replacement of $\mathrm{SO}_{3} \mathrm{H}$ group by $\mathrm{NO}_{2}$ group to give ultimately 2, 4 6 -trinitrophenol.
70. (D) Aldehydes which do not have an $\alpha$ hydrogen atom (e.g., HCHO and $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{CHO}$ ) undergo self-oxidation and reduction reaction on treatment with concentrated alkali solution. One of the molecules gets reduced to alcohol and the other gets oxidised to the acid.
$2 \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{CHO} \xrightarrow{\mathrm{NaOH}} \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{CH}_{2} \mathrm{OH}+$ $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-} \mathrm{Na}^{+}$
71. (D) The reagent reacts with $\mathrm{H}_{2} \mathrm{O}$
$\mathrm{RMgX}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{RH}+\mathrm{Mg}(\mathrm{OH}) \mathrm{X}$
72. (B) 100 mol NaCl is doped with $\mathrm{SrCl}_{2}$ $=2 \times 10^{-3} \mathrm{~mol}$
$\therefore 1 \mathrm{~mol} \mathrm{NaCl}$ is doped with $\mathrm{SrCl}_{2}$
$=2 \times 10^{-5} \mathrm{~mol}$
As each $\mathrm{Sr}^{2+}$ ion creates one cation vacancy, therefore cation vacancies $=2 \times 10^{-5} \mathrm{~mol} /$ mol of NaCl
$=2 \times 10^{-5} \times 6.02 \times 10^{23} \mathrm{~mol}^{-1}$
$=12.04 \times 10^{18} \mathrm{~mol}^{-1}$
73. (D) Order may or may not be equal to molecularity.
74. (A) $\quad \mathrm{ClF}_{3}$ where $\mathrm{C} l$ is $\mathrm{sp}^{3} \mathrm{~d}$ hybridised has a T-shape structure with two lone pairs of electrons on Cl atom.
75. (B) Only $1^{\circ}$ amines (i.e., $\mathrm{Me}-\mathrm{O}-\mathrm{NH}_{2}$ in the present case) gives positive carbylamine reaction.
76. (C) Since, the compound is optically active and does not rotate the plane of polarized light, therefore, the compound must be a racemic mixture.
77. (B) Xanthoproteic test involves heating of a protein with conc. $\mathrm{HNO}_{3}$ when yellow colour is obtained.
78. (C) Aldehydes are easily oxidised to the corresponding acids by Tollens' reagent while all others are strong oxidising agents and hence, cleave the molecule at the site of the double bond yielding a mixture of products.

79. (B) In the smelting process, the ore copper pyrites is converted into FeO which then combines with silica to give $\mathrm{FeSiO}_{3}$ as a slag.
$\mathrm{FeO}+\mathrm{SiO}_{2} \rightarrow \mathrm{FeSiO}_{3}$
80. (A) Reactions I and II give 2-propanol, i.e.,
I. $\mathrm{CH}_{3} \mathrm{CH}=\mathrm{CH}_{2}+\mathrm{H}_{2} \mathrm{O} \xrightarrow[\text { Mark.add. }]{\mathrm{H}^{+}} \mathrm{CH}_{3} \mathrm{CHOHCH}_{3}$ 2-Propanol
II. $\mathrm{CH}_{3} \mathrm{CHO} \xrightarrow[\text { (ii) } \mathrm{H}_{3} / \mathrm{HgI}_{2} \mathrm{O}]{\text { (i) } \mathrm{CH}_{3} \mathrm{MI}} \mathrm{CH}_{3}-\mathrm{CHOH}-\mathrm{CH}_{3}$ 2-Propanol
In contrast, reaction III gives 1-propanol and IV gives 1, 2-propanediol.
III. $\mathrm{CH}_{2} \mathrm{O} \xrightarrow[\text { (ii) } \mathrm{H}^{+} / \mathrm{H}_{2} \mathrm{O}]{\text { (i) } \mathrm{C}_{2} \mathrm{HgI}} \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{CH}_{2} \mathrm{OH}$

> 1-Propanol

1, 2 -Propanediol
81. (D) Bredig's arc method cannot be used for the preparation of colloidal sol of Na as it reacts with water vigorously.
82. (A) $\mathrm{He}-\mathrm{O}_{2}(80 \%: 20 \%)$ mixture is used by deep sea divers for artificial respiration. Because of low intermolecular forces in He , it is much less soluble in aqueous solutions (as compared to $\mathrm{N}_{2}$ ) such as blood and does not cause "caisson sickness" or "bends" by bubbling out of blood when the worker moves from high pressure (while in deep sea) to atmospheric pressure.
83. (A) For a bcc unit cell
$\mathrm{r}=\frac{\sqrt{3}}{4} \mathrm{a}=\frac{1.732}{4} \times 4.28 \stackrel{\circ}{\mathrm{~A}}=1.86 \stackrel{\circ}{\mathrm{~A}}$
84. (A) Van-Arkel method involves converting the metal to a volatile stable compound.
$\mathrm{Ti}+2 \mathrm{I}_{2} \xrightarrow{500 \mathrm{~K}} \mathrm{TiI}_{4}$ (volatile stable); Impure

$$
\mathrm{TiI}_{4} \xrightarrow[\text { Pure }]{1700 \mathrm{~K}} \mathrm{Ti}+2 \mathrm{I}_{2}
$$

85. (B) Magnetic moment, $\mu_{\text {eff }}=3.87$ B.M. corresponds to the number of unpaired electrons $\mathrm{n}=3$ by applying the formula $\mu_{\text {eff }}=\sqrt{\mathrm{n}(\mathrm{n}+2)}$ B.M.
For $\mathrm{n}=1, \mu=1.73$ B.M.; for $\mathrm{n}=2, \mu=2.83$
B.M. ; for $\mathrm{n}=3, \mu=3.87$ B.M. and so on.
86. (D) Copper ferrocyanide ppt. acts as a semipermeable membrane.
87. (C) Reducing character of hydrides increases down the group.
88. (C) $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{~N}_{2} \mathrm{Cl}+\mathrm{KCN} \xrightarrow{\Delta} \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{CN}+\mathrm{N}_{2}+\mathrm{KCl}$
89. (C) Wilkinson's catalyst is used for the hydrogenation of alkenes.
90. (A)
